## Foreword

Welcome to Frome Market and this genuine herd dispersal on behalf of Pittard Partners Higher Osborne Farm, the herd having been removed to the market for convenience of sale. This sale arises due to the decision by the partnership to cease milk production and make a change to their farming policy. The herd was established in 1991 at the beginning of the tenancy with the purchase of 50 cows and since that time have been predominantly closed bar a few purchases when required mainly from our dairy ring at Frome.

Dams are of a good Friesian Holstein type medium size and will be well suited to any existing herd with both larger and smaller numbers. The cows are particularly quiet and easy to manage. Milking takes place twice daily through a 12/12 herringbone parlour and is carried out by family members.

**Cubicle** housed on sand beds and fed on a TMR consisting of 200kg of blend, 2T maize and 2T grass silage, and summered on well managed leys, concentrates are also fed at milking. The herd is NMR recorded and herd average for last year was 7,527 litres, BF 5.18% Pro 3.27%, currently producing 25.9 litres average (due to late in lactation). The milk is supplied to Barbers. Hygiene management is of paramount importance to the partnership which, is reflected in the Cell Count and is quite remarkable, being only **35** for the first 3 months of 2025. Dams are served by AI to sexed and beef sires and is carried out by Sam Pittard with calving between **July and January**. Regular veterinary inspections are carried out by Anna Hares of the Shepton Veterinarian Practice who has included a note in this catalogue.

This herd can be highly recommended by the auctioneers to anyone looking for good, honest well managed dairy cattle.

### Herd Health

There is a BVD vaccination programme in place, but the herd is naturally free of IBR & Lepto. Dams are screened via milk samples quarterly with only ever 1 dam showing results in the history of the herd, there has never been a positive case of Johnes on the farm.

Mastitis: 1 case in 2025 and only 4 cases in the last 3 years.

TB: The holding is subject to a 6 monthly tuberculosis testing regime. A clear test was carried out on 22nd April 2025.

BTv: Being in the BTZ, a BTv test has been carried out, achieving clear status on 28th April 2025.

**Calving Pattern:** 15 due July, 10 Aug, 13 Sept, 4 Oct, 8 Nov, 6 Dec, 10 January.

**Lactation Ages:** 13 1st Calvers, 20x 2nd, 13x 3rd, 16x 4th and 4x 5th.

**Herd No:** UK 341274

**CPH:** 11/190/0031.

**Farm Assurance:** Red Tractor

**For those who are unable to attend the sale in person, the auction will be live on the Marteye bidding platform.**

**PLEASE NOTE:**

The cattle will be sold in Guineas.

Dams sold being PD+ will only be warranted if over 12 weeks in-calf at the time of sale. Any claim under this guarantee must be made in writing, and supported by a veterinary surgeon's certificate, to the Auctioneers within seven weeks of the date of the sale.

**PLEASE OBSERVE THE RULES REGARDING FOOT DIPS.**

**ALL STOCK IS SOLD IN ACCORDANCE WITH CONDIITONS OF SALE AS PRODUCED BY THE LIVESTOCK AUCTIONEERS ASSOCIATION AS ON DISPLAY IN THE MARKET OFFICE**

Shepton Vets has been providing veterinary services to Messrs P and H Pittard since 2006, it has been a great pleasure to have been their routine vet for the past 6 years.

This is a herd of cows that have been extremely well looked after, bulk somatic cell counts are usually under 100 and their mastitis tubes regularly go out of date - a good reflection of the low levels of disease on this farm.

Annual BVD youngstock screens have been clear since 2022, BVD testing was done in April 2025 (youngstock screen and bulk milk PCR) both sets of test results were negative. Biannual whole herd Johnes testing has been carried out for milk contract compliance.

We wish the Pittard family well as they cease milk production at Higher Osborne Farm.
